

Welcome to Project Mafia Case, a high-stakes game of deduction, survival, and deception where trust is a rare commodity and danger lurks in the shadows. When the game begins, a one-minute registration window opens for players to join the investigation. Once the lobby closes, secret roles are assigned privately to everyone involved, dividing the town into a hidden Mafia member, a protective Doctor, an investigative Detective, and ordinary Villagers who must rely on their wits to survive.

Because private direct messages cannot handle standard username tags, every registered player is assigned a secret letter identifier from the case roster, such as Player A, Player B, or Player C. As night falls over the city, the town sleeps while special roles take action in secret. The Mafia targets someone to eliminate, the Doctor attempts to correctly guess who is under attack to save them, and the Detective investigates suspects to see if they are connected to the criminal syndicate. Both the Doctor and the Detective face immense pressure; they each have a strict three-strike limit for missed saves or false leads on innocent citizens. If either role accumulates three strikes, their authority is immediately stripped away, their medical license or badge is revoked, and they are demoted to ordinary villagers for the remainder of the game.

When morning arrives, the bot publicly announces who survived or perished during the night, while fallen players become ghosts who can chat and complain but are permanently stripped of their voting power. An anonymous city report is also broadcasted to the group chat, giving the town vague clues about how well the medical and investigative efforts performed without exposing anyone's true identity.

Living players then enter a crucial two-minute day phase to debate openly, share theories, defend themselves, and cast their public votes using standard tags against anyone they suspect. Once time expires, the bot sums up the total votes to form a unified village verdict. If the collective choice points directly to the actual Mafia member, the game ends instantly in a glorious victory for the town. However, if the village accuses an innocent person, no one is executed or eliminated that day, the Mafia slips deeper into the shadows, and the game seamlessly loops back into another dangerous night cycle until the true culprit is finally brought to justice.
